

# Overview of University of Oxford Policy on the Management of Data Supporting Research Outputs

- The research data covered by the policy is the information needed **‘to support or validate a research project’s observations, findings or outputs’**
- Research data should be:
  - Accurate, complete, identifiable, retrievable, and securely stored
  - Where possible, able to be made available to others
  - Research data should be retained for ‘as long as it has continuing value’ – but a minimum of three years after publication of research
- Specific requirements from funders take precedence
- The policy applies to all members of the University who are engaged in research
- Researchers are responsible for:
  - Developing and documenting clear data management procedures
  - Planning for the ongoing custodianship of their data
  - Ensuring that legal, ethical, and funding body requirements are met
- The University is responsible for providing access to the services, facilities, and support needed to allow researchers to comply with the policy
