

Aims

An opportunity to reflect on our current practice around research data including policy and practicalities

Pick up tips from each other, and increase awareness of the policies, facilities and support from the University and other actors

Develop ideas for follow up actions and activities

In small groups discuss

- What research data do you collect / create?
- How do you store and access this data?
- Is it safe and secure?
- Is it accessible?
- What (if anything) are your concerns?
