

Overview of University of Oxford Policy on the Management of Data Supporting Research Outputs

- The research data covered by the policy is the information needed ‘to support or validate a research project’s observations, findings or outputs’
- Research data should be:
 - Accurate, complete, identifiable, retrievable, and securely stored
 - Where possible, able to be made available to others
 - Research data should be retained for ‘as long as it has continuing value’ – but a minimum of three years after publication of research
- Specific requirements from funders take precedence
- The policy applies to all members of the University who are engaged in research
- Researchers are responsible for:
 - Developing and documenting clear data management procedures
 - Planning for the ongoing custodianship of their data
 - Ensuring that legal, ethical, and funding body requirements are met
- The University is responsible for providing access to the services, facilities, and support needed to allow researchers to comply with the policy

Overview of University of Oxford Policy on the Management of Data Supporting Research Outputs

- The research data covered by the policy is the information needed **‘to support or validate a research project’s observations, findings or outputs’**
- Research data should be:
 - Accurate, complete, identifiable, retrievable, and securely stored
 - Where possible, able to be made available to others
 - Research data should be retained for ‘as long as it has continuing value’ – but a minimum of three years after publication of research
- Specific requirements from funders take precedence
- The policy applies to all members of the University who are engaged in research
