

FAIR principles

- Consider taking steps to make data:
 - Findable
 - Accessible
 - Interoperable
 - Reusable

Overview of University of Oxford Policy on the Management of Data Supporting Research Outputs

- The research data covered by the policy is the information needed ‘to support or validate a research project’s observations, findings or outputs’
- Research data should be:
 - Accurate, complete, identifiable, retrievable, and securely stored
 - Where possible, able to be made available to others
 - Research data should be retained for ‘as long as it has continuing value’ – but a minimum of three years after publication of research
- Specific **requirements from funders take precedence**
- The policy applies to all members of the University who are engaged in research
- Researchers are responsible for:
 - Developing and documenting clear data management procedures
 - Planning for the ongoing custodianship of their data
 - Ensuring that legal, ethical, and funding body requirements are met
- The University is responsible for providing access to the services, facilities, and support needed to allow researchers to comply with the policy
